

A **Ready Business** is always confidently connected at **Express speeds**

Vodacom IP Connect Wireless Express

Vodacom IP Connect Wireless Express provides customers that are serviced by Vodacom's world class Broadband wireless infrastructure, the ability to get confidently connected to Vodacom's MPLS VPN (Virtual Private Network) and Dedicated Internet Access (DIA). IP Connect Wireless Express combines the versatility and lower cost of the Broadband access with our business class managed services.

Connect using IP Connect Wireless Express

Connectivity to MPLS VPN

Choose to connect to your Virtual Private Network at speeds, with a committed information rate, ranging from 204.8Kbps to 8Mbps. The bandwidth is burstable to a maximum of 10 times the speed subscribed to when the network is not experiencing load.

Connecting to DIA

The Dedicated Internet Access service is available at speeds between 2Mbps and 80Mbps when no congestion is experienced on the network. Contention can cause the speed to fluctuate according to the access medium minimum and maximum symmetrical throughput indicators.

Vodacom
Power to you

One stop shop for real

No matter which service you choose, provided you are within our wireless footprint, we will install all the necessary equipment and infrastructure including the wireless access, indoor termination equipment and managed routers.

Burstable bandwidth:

Due to the contended nature of the Broadband access infrastructure, the Committed information Rate (CiR) is set at a 10th of the Broadband circuit's capabilities to ensure the throughput on the connection. Customers can burst over the CiR to the maximum of the circuit capacity when the bandwidth is available.

Example:

A customer subscribed to a 80Mbps IP Connect Wireless Express service, can burst to a maximum capacity of 80Mbps when capacity is available on the network. The guaranteed throughput is 8Mbps.

Connecting to the VPN or to the Managed Internet Service

To connect to the MPLS VPN network, Vodacom will provision a managed router on your premises and offer you a committed information rate of between 204Kbps and 8192Kbps with a standard Class Of Service (COS) for VPN connectivity.

For dedicated internet connectivity, Vodacom will also provision the managed router and offer an internet service ranging from 2Mbps and 80Mbps which is contended on a 10:1 basis by the access medium min and max symmetrical throughput indicators"

What are the benefits of the product?

- Committed information rate over broadband access combines the low cost benefits of a Broadband service with the predictability of a managed service.
- IP Connect Wireless Express is provisioned over a managed router that allows proactive monitoring offering peace of mind.

Where is the product available?

The product is available in areas where Vodacom has deployed the Broadband Connect Wireless premium infrastructure.

IP Connect Wireless Express Pricing

The cost of this service will be dependent on whether you require connectivity to Vodacom MPLS VPN or Dedicated Internet Express and also the bandwidth requirements. You can also specify your router which will further impact pricing.
