The Journey to Digital

The transition of businesses to digital has been accelerated beyond expectations. Businesses had to mobilise their workforce to keep the lights on, requiring them to convert their 'traditional' way of connecting with all stakeholders to the 'next normal'.

SD-WAN

Traditional Business

A business with legacy infrastructure and limitations in terms of business mobility and use of data and information in the business.

- Extensive time spent commuting to conduct business
- Physical datacentres and equipment
- Physical space with legacy infrastructure and multiple providers
- Manual processes
- Meetings in person, physical boardrooms and locations
- Basic productivity tools: Office 365, etc.
- Mobile heavy, voice and data (MBB)
- Unsophisticated Data and Analytics used to drive business decisions
- Limited use of Artificial Intelligence

Hybrid Business

A business embracing the best of digital and integrating it to traditional business models and structures.

- Some physical space, but focus on meeting rooms and collaboration spaces
- Significant percentage of workforce work remotely, workforce rotates from physical to digital
- Significant number of meetings transition to virtual
- Migration to the cloud, but also the use of physical data servers
- Increased use of collaboration software and productivity tools
- HQ enabled with fixed line connectivity while workforce is digitally driven
- Big Data, AI, Analytics for Business more prevalent due to cloud services adopted
- Security challenges to new remote workforce

Digital Business

A business underpinned by a secure, flexible ready network, driven by Big Data, AI and analytics and a connected workforce that are geographically dispersed.

- Meetings are held virtually, workforce is mostly remote
- Spaces are used on a rotational basis and only for larger forums
- Data and applications are hosted, managed and secured by cloud services
- Comprehensive adoption of collaboration software and productivity tools
- Efficiency is managed with Artificial Intelligence
- Workforce connected with a digital network and usage is optimised
- Big Data, Artificial Intelligence, Analytics used to drive key business decisions and maintain productivity
