Start building the future of retail with Vodacom Digital Buildings

Vodacom Digital Buildings is an IoT solution designed for smarter business. Track and monitor energy output, inventory, and air quality with our seamless integration technology that enables instant inter-operability between your new and legacy equipment.

Further together
vodacom business

The five ways
Vodacom Digital Buildings can benefit your business

1.

Centralised Monitoring
Enable monitoring of a single or several locations using our IoT platform.

2.

Limit Spread
During the pandemic by monitoring building occupancy, the consumer will be informed and can plan shopping trips. This will calm consumer decision-making and prevent last minute rushes and overcrowding. Store owners can also use slower periods to drive sales based on the store being within "safe" occupancy levels.

3.

Limit Spread
During the pandemic by using our gateway and camera or an android based smartphone, queue management & people counting can also be implemented to manage queue lengths and social distancing. This can also inform owners to open more tills or streamline the current consumer experience.

4.

Thermal Screening
During the pandemic through the addition of a thermal screening solution individuals with high temperatures can be identified and notified. This is to help minimise contact with possible sick or infected people.

5.

Traffic Monitoring
By using our gateway and traffic monitoring AI, we monitor roads and their vehicle numbers to identify areas of congestion. Existing camera infrastructure is used.
