Vodacom Business Internet
Fast. Reliable. Built for Growth.

Introduction

Businesses often use consumer-grade internet because there's less paperwork, and it's often more affordable. But what they don't always realise is that this can quietly chip away at productivity, professionalism, and growth.

As its name suggests, Business Internet from Vodacom Business is built for business. It's not just about speed and price, it's about reliability, consistency and performance that your business can count on. Because when your connectivity keeps up, so can your business.

Business Internet Benefits Explained

Lower Latency

Latency is the delay you experience when you're loading a site or joining a call. Lower latency means a faster, more responsive connection, which means smoother video calls, faster apps and better remote work.

LTE Backup

If your main line goes down, a wireless backup kicks in automatically. This means your business always stays online, even when the unexpected happens.

Expert Management for Multiple Lines

Having a partner like Vodacom means you don't have to juggle multiple contracts, providers, or support teams. You get one bill and expert support across all your connections.

Business Internet Benefits Explained

Different plans offer different benefit combinations. Choose the one that best fits your business

Contention Ratio

All upstream and backbone Internet infrastructure is shared. With consumer-grade internet, there's a larger number of people sharing the same infrastructure, which means performance can be impacted. Business Internet keeps congestion lower, so your business speeds stay more consistent, even during those busy times.

Symmetrical Access

Consumer-grade internet is fast for downloads but slow if you're uploading or sending files (and that's the reason the up and download speeds noted on consumer lines are different from each other). If you regularly upload content, select a Business Internet plan that offers symmetrical speeds (it's not available across all plans).

Static IP Address

Business Internet offers a static IP address on select plans. This is essential for teams who need to connect remotely, as a fixed IP ensures the access URL stays the same every time. It's also crucial for running services like CCTV, which rely on a consistent connection point. In contrast, most consumer packages come with a dynamic IP address that changes regularly, making remote access less reliable.

Business Internet Fibre

Uncapped, unshaped and unthrottled, Business Internet Fibre Offers super-fast, reliable fibre connectivity with speeds of up to 200Mbps. Perfect for businesses that need high speed connections for access to business-critical online activities such as large data transfers, cloud systems, remote collaboration, and the option to add voice services. Vodacom Business not only builds and manages its own fibre network, but we also have agreements in place with most fibre providers, so you can get all your connectivity solutions through one provider and one simple Vodacom bill. Vodacom is also your point of contact for service, should you ever experience problems.

Ideal For: Small to medium businesses, growing teams, and larger enterprises with higher speed and stability needs.

FEATURES

Speeds: Choose options from 10Mbps to 200Mbps with symmetrical or asymmetrical upload and download speeds.

Setup: Free installation on selected 24- and 36-month contracts. Should you have to wait, for fibre to be installed, we offer free LTE for the first month and you get 50GB LTE Backup for the duration of the contract.

Business Internet LTE

Is a high-speed wireless internet solution offering reliable internet access that supports multiple devices for file sharing, collaboration, and day-to-day operations. This service can be used wherever there is power; simply take along your router to where you need to connect to the internet.

Ideal for: Small businesses, home offices, and teams needing quick, reliable internet.

FEATURES

Speeds: Average speeds of 25Mbps. Choose from 10Mbps, 20Mbps, or 30Mbps plans. Because LTE is an asymmetrical service (faster download than upload speeds) it is often the most readily available and cost effective Business Internet option available.

Setup: Plug-and-play with router, SIM, and optional static IP address included.

Business Internet 5G

Is next-generation wireless connectivity with ultra-fast speeds, lower latency, and seamless performance for businesses with multiple connected devices.

Ideal for: offices, SMEs, startups and teams needing high-speed, reliable connectivity for cloud services, video calls, and smart working environments.

FEATURES

Speeds: Choose 25Mbps, 50Mbps, or 100Mbps options.

Setup: Plug-and-play for easy self-installation or opt for professional installation with an outdoor 5G receiver for stronger indoor signal.

Business Internet Wireless

Offers fast, uncapped wireless internet with no copper lines. Symmetrical speeds range from 10Mbps to 80Mbps. Another more affordable option is Business Internet Wireless Air, which is asymmetrical and offers speeds of up to 30Mbps (also uncapped).

Ideal for: SMEs and businesses in areas where fibre or 5G is not yet available.

FEATURES

Speeds: Uncapped internet from 10Mbps to 80Mbps.

Setup: Includes a TP Link MR600 router with interim LTE access available on the 80Mbps plan. Landlord approval is required for installation of the service.

Why Vodacom Business?

Business Internet gives your business more than just business-grade connectivity. With us, you get reliable speeds, expert 24/7 local support, backup when you need it, and a connection designed to keep your business running.

Plus you know that your business is future-ready and you have the ability to add other services including VoIP, Cloud and more when required.

Unlike local providers that rely on local cacheing to improve internet browsing speeds, Vodacom Business is a Tier 1 network operator has high speed connectivity to all major service providers. This ensures a uniformly high performance experience whether you're browsing local or international websites and services.
